

September 8, 2022

Dear Resident,

Due to the high concentration of mosquitoes in our city, the City of Slaton, along with a coalition of eleven area cities, will conduct aerial spraying for mosquitoes on Saturday and Sunday evening, September 10, 2022, and September 11, 2022.

- The plane will spray the City of Slaton sometime during a time period starting at 6:00 p.m. on Saturday evening, September 10th, or Sunday evening, September 11th through the overnight hours, weather permitting. The actual time of spraying will be determined by where we fit in the line-up of cities. Actual spraying of the City should not take more than 1 hour.
- Vector Disease Control International is the company that will be spraying. They specialize in aerial application, have been in business since 1992, and have over 40 offices across the United States. These products are being applied in strict accordance with label instructions as set forth and approved by the Environmental Protection Agency. The company is fully licensed and certified by Federal monitoring agencies. Visit www.vdci.net or www.npmapestworld.org for more information about the company.
- The product used will be Perm-X UL 31-66; visit www.clarke.com for product information.

Thank you for your patience with this process! The City of Slaton is committed to the health and safety of our citizens.

Wade Willson, CPM
City Administrator
